ENHANCED ADMINISTRATION

for Microsoft Dynamics 365

- 📍 User and employee data automated synchronization

ENHANCED ADMINISTRATION

User and employee data automated synchronization

Feature enabling the automatic creation and maintenance of employee and user data in Microsoft Dynamics 365 based on the interface with Azure Active Directory (AAD).

Entering users and employees in Microsoft Dynamics 365 is needed for the smooth execution of all ERP processes.

The data creation and maintenance is not automated in the in standard application.

Enhanced administration automates the employee and user creation process in use cases where employees are managed by HR in a separate HR information system, and IT manages users in the AAD as a central solution for all business applications.

Benefits

Simpler for both HR and IT

- ♥ HR users manage employees in their HR information system only.
- ♥ IT system administrators manage users in the AAD only.
- ♥ No redundant data entry

Functions

Interface	Interface with Azure Active Directory and automated transaction creation that updates data in Microsoft Dynamics 365.
Update	Automatic creation of employee and user data as well as associated data (resources, suppliers, positions in the organizational hierarchy, etc.) according to settings and mapping tables.
Visualization	View transactions from the Azure Active Directory and their status. Ability to restart the update of a transaction in error after correction.
