PRESS RELEASE - Lausanne, January 19, 2026

Digital transformation of law firms: WorkinWith confirms its leadership with four major Microsoft Dynamics 365 F&O projects.

Building on its experience after four successful deployments, WorkinWith is establishing its methodology and solution: Workin *Legal* 365, dedicated to the legal sector in Europe.

Created in 2022, this start-up composed of Microsoft experts already has numerous successful implementations to its credit. WorkinWith is attracting particular attention with its four successful Legal projects, carried out between 2025 for major law firms.
These leaders in the legal sector are abandoning their old tools in favor of the innovative and more agile approach offered by WorkinWith. This paves the way for new innovations, particularly in the areas of case management and supervision, process automation, digital billing, and above all, compliance, which is essential for these professions.

Legal professionals need to streamline their processes and focus on procedures, not administrative tasks. Digital transformation is therefore a real opportunity for growth, improvement, and modernization for law firms.

From 180 to 4,800 employees, Microsoft Dynamics 365 F&O implementations have optimized processes, improved the customer experience, and supported the growth of major European legal brands.
Despite complex specifications, demanding functional constraints, a large number of simultaneous deployments, and even launches during the fiscal year, the execution of these complex projects is exemplary.

In addition, a dedicated PMS, Workin *Legal* 365,enables these law firms to benefit from more precise features that meet their specific needs.

Workin *Legal* 365complements Microsoft Dynamics F&O by offering features that facilitate stakeholder management with case roles and the identification of potential conflicts of interest. It also includes customer and case risk analysis questionnaires and a case time tracking tool that provides an accurate overview of case progress.
This represents a unique solution for centralizing invoices and managing cash flow via essential features such as E-Billing (Ledes), often complex pre-billing and invoicing, a billing cockpit with adjustment management, and a set of complementary features that enhance the standard D365 F&O solution.

Passionate about technology, WorkinWith's Microsoft experts developed Workin *Legal* 365in collaboration with law firms, which were a real source of inspiration and an essential aid in understanding their very specific business.

"These four successful projects are the first of many more to come. In this field, we know how essential it is to understand business needs in order to support successful digitalization."
- Stephane Pasche, CEO WorkinWith
